- Notes:**
1. ACSA will obtain from its contracted utilities contractor a cost to install services on dual lane highways.
 2. Connection fees for a water service larger than 1", sewer service larger than 4", or water or sewer service on a dual lane highway shall be determined by the Director.
 3. There are 4 methods of determining availability fees other than the above chart. See below. If the average daily water usage is provided, the Director will determine fees using all 5 methods and assess the lowest.
 - (a) Amherst County Code, Chapter 15, Article IV, Section 15-124, Tables 1 and 2;
 - (b) Estimating average daily water usage based on plumbing fixture counts and/or occupancy, dividing by 275 gallons per day to determine the number of Equivalent Residential Units, and multiplying by the residential availability fee.
 - (c) Using (b) above with the documented average daily water usage of similar facilities.
 - (d) Using (b) above with an estimate of daily water usage sealed by a licensed architect or engineer on the estimator's letterhead.
- (b), (c), and (d) may require execution by the applicant of a written agreement with ACSA that, if actual average daily water usage exceeds the estimate, an additional availability fee will be assessed.
